

RICHLITE PFAS STATEMENT

Absence of Intentionally Added ‘Forever Chemicals’

Richlite is committed to providing safe, sustainable, and environmentally responsible materials. Public concern about PFAS (Per- and Polyfluoroalkyl Substances) — often called “forever chemicals” — has grown due to their persistence in the environment and potential human health impacts.

Richlite confirms that its products **do not contain intentionally added PFAS (Per- and Polyfluoroalkyl Substances), including PFOS, PFOA, or any other related “forever chemicals.”**

Our suppliers have provided written assurance that their raw materials are manufactured without the intentional use of PFAS, PFOS, PFOA, or related compounds. To the best of our knowledge, based on supplier declarations and material certifications, Richlite products are free from these substances.

This statement aligns with global regulatory initiatives, including the European Chemicals Agency (ECHA), U.S. EPA actions, and state-level bans in the U.S., which are moving toward broad restrictions of PFAS across multiple industries. By ensuring our supply chain is free of intentionally added PFAS, Richlite reinforces its commitment to health, safety, and sustainability for both food-contact and architectural applications.

Conclusion: Richlite products are manufactured without the use of intentionally added PFAS, PFOS, PFOA, or other “forever chemicals,” as confirmed by our suppliers.
